

SUMMARY

Full-Stack & AI Engineer with 3+ years of experience designing and developing modern web applications, now focused on building **data-driven, AI-powered solutions**. Skilled in combining robust backend systems with intelligent automation and analytics to create web apps that learn, adapt, and deliver real value. Passionate about transforming traditional development into smarter, insight-driven engineering.

EXPERIENCE

Intern

EvoSoft Tech

07/2024 - 10/2024

- Completed a front-end development internship at **EvoSoft Tech**, collaborating within a dynamic team to deliver real-world web solutions.
- Gained hands-on experience with **Git and GitHub**, managing branches, resolving merge conflicts, and contributing collaboratively to shared repositories.
- Recreated and enhanced the **Cheeziious website frontend**, improving design consistency, responsiveness, and overall user experience.

EDUCATION

Bachelor of Science in Artificial Intelligence

Islamia University of Bahawalpur

09/2022 - Present Bahawalpur, Pakistan

PROJECTS

CO2 Emission Predictor

Developed a **machine learning web app** to predict CO₂ emissions for various car models using an automotive dataset. Collected and preprocessed vehicle data, engineered features, and trained predictive models to enhance accuracy. Integrated the model into a **Flask-based interface**, enabling real-time emission predictions through an intuitive dashboard

Stock Market Dashboard (Data Science Project)

Developed a **data visualization dashboard** showcasing real-time stock data collected through **web scraping** and the **yfinance** library. Processed and cleaned datasets from multiple sources to ensure accuracy, then visualized stock trends and performance for clear, data-driven insights.
